WELCOME TO BLACK DIAMOND

Black Diamond Security provides technology Led security Solutions to a number of key market sectors, focussing on Asset Protection, People and Property.

The business is unique in the provision of Professional Security Services, when compared to the general market place within the UK in that:

- Our assessment of your security needs is paramount in the selection of the services we offer, and are tailored to your requirements.
- Technology Led Solutions are used in every case to complement, the deployment of personnel.
- Black Diamond provide bespoke technology solutions which are manufactured in house by our highly experienced engineers. Our in-house team of experts not only manufacture our unique products we also mobilise, monitor, maintain and demobilise to provide you with a complete tailor-made solution.

WHY CHOOSE US?

As a trusted security company within the industry, we have vast experience in proactive and reactive solutions, installation and management of installed security systems and providing superior quality without losing that personal touch.

Black Diamond Security operations are delivered by highly trained security specialists and are among the best in the industry. We have a depth of knowledge and a set of proven capabilities that sets us apart from our competitors.

OUR WORKING LINE

We currently have a number of operations, offices and operational rooms across the UK already fully functional. This allows us the opportunity to provide our clients a nationwide 24/7 service.

- The ability to launch and set up at a moment's notice
- Continued support in case of a crisis
- A top-quality service at a competitive rate

Black Diamond Security's success lies with its hand picked team, partners, extensive equipment and development of long-term relationships with our clients. This enables us to provide a top-quality service that's tailored to your needs.

Our integrated approach enables us to be able to provide, cover and support upon request all aspects and phases of our clients' operations:

TECHNOLOGY SOLUTIONS

- Rapid Deployment Cameras (RDC's)
- Fixed CCTV
- BDEYE
- 4G Connectivity
- Remote Monitoring
- Access Control / Biometrics
- Intruder Alarms
- Fire Alarms
- 110V Rapid Deployment Cameras (110VRDC's)
- Gate Automation
- Security Lighting
- 24/7 Control

Security never sleeps so neither do we, our 24/7 National Control Centre provides control and support to our operations in the UK. Our responsive approach includes a management facility that directs 24-hour callouts, technical support, vehicle maintenance and logistical and administrative support that is a hallmark of our success.

OUR TECHNOLOGY

Black Diamond Security is constantly looking to expand and refine security solutions to aid clients. Our solutions offer complete peace of mind and allow you to focus on your objectives without having to worry about security issues.

RDC - Rapid Deployment Camera

Our Rapid Deployment Cameras (RDC's) are perfect for sites without 24/7 power, they can be used in conjunction with manned guarding services or independently. RDC's can be operational within the hour and an escalation process will be set up with the client. They are designed to be a temporary solution for an at-risk site.

Fixed CCTV

Surveillance is a priority for any site, whether it be your residential property or your offices; 24/7 fixed CCTV offer the latest in technology for monitoring your site.

The use of CCTV on your site or property provides a highly visible deterrent to potential intruders, whilst allowing you to see at any given moment who is on your site.

BDEYE

The BDEYE is an external self-sufficient intruder system with video verification. This rapid response system provides a visual deterrent with the ability to work in harmony with other security solutions such as on-site guards or mobile patrols.

The BDEYE is a wireless battery operated PIR (Passive Infrared) with video verification that is triggered by motion detection. The BDEYE System is intended for outdoor applications such as void or vacant properties.

4G Connectivity

The newest addition to our technology portfolio, is to give clients the ability to access the internet. Using the 4 major carriers, there hasn't yet been a site we have been unable to connect. This is not just down to the provider, but our bespoke receiving antenna. We work closely with our manufacturer to give users the best possible signal on site.

Remote Monitoring

All our security solutions come with automated signalling, raising an alert and informing the appropriate person when an activation has been detected.

Access Control/Biometrics

We offer a full assessment, installation, maintenance and repair services for all domestic and commercial applications.

• Prevent unauthorised access

Secure your premises with the peace of mind that unwanted visitors cannot enter your building without authorisation.

• Complete control

Our systems can operate doors, gates and barriers and are available using telephone and video entry, access cards or biometric readers.

Intruder Alarms

Black Diamond Security offer state-of-the-art monitored intruder alarms to protect your business property and assets 24 hours a day. Our systems provide a cost-effective deterrent to intruders with the peace of mind knowing that in the event of an intrusion, the system will signal to the appropriate Keyholder.

Live feed video analytics system

The Live Feed Video Analytic system is a perfect solution for problematic hot spots e.g. gates, level crossing, storage containers etc. It can be powered by the clients' 110V generator or it can run self-sufficiently by our hydrogen cell, solar panels, and batteries.

We designed The Live Feed Video Analytic system especially for the abuse of railway crossing, gates and storage containers. The system has the intelligence to give you a multitude of information for example how many people have gone through the gate on a specific day, it can also tell you if the gate has been left open for longer than 5 minutes. Another great feature that the Live Feed has is the ability to store 2000 number plates in its own internal memory. (ANPR)

The Live Feed can also provide Health & Safety Management for the site with its deep learning-based analytics.

Fire Alarms

Black Diamond Security are specialist installers of state-of-the-art Fire Alarm Systems. With over 10 years of experience, we offer a full assessment, installation, maintenance and repair services for all domestic and commercial applications, either a standalone (bells only) or remotely monitored system.

110VRDC

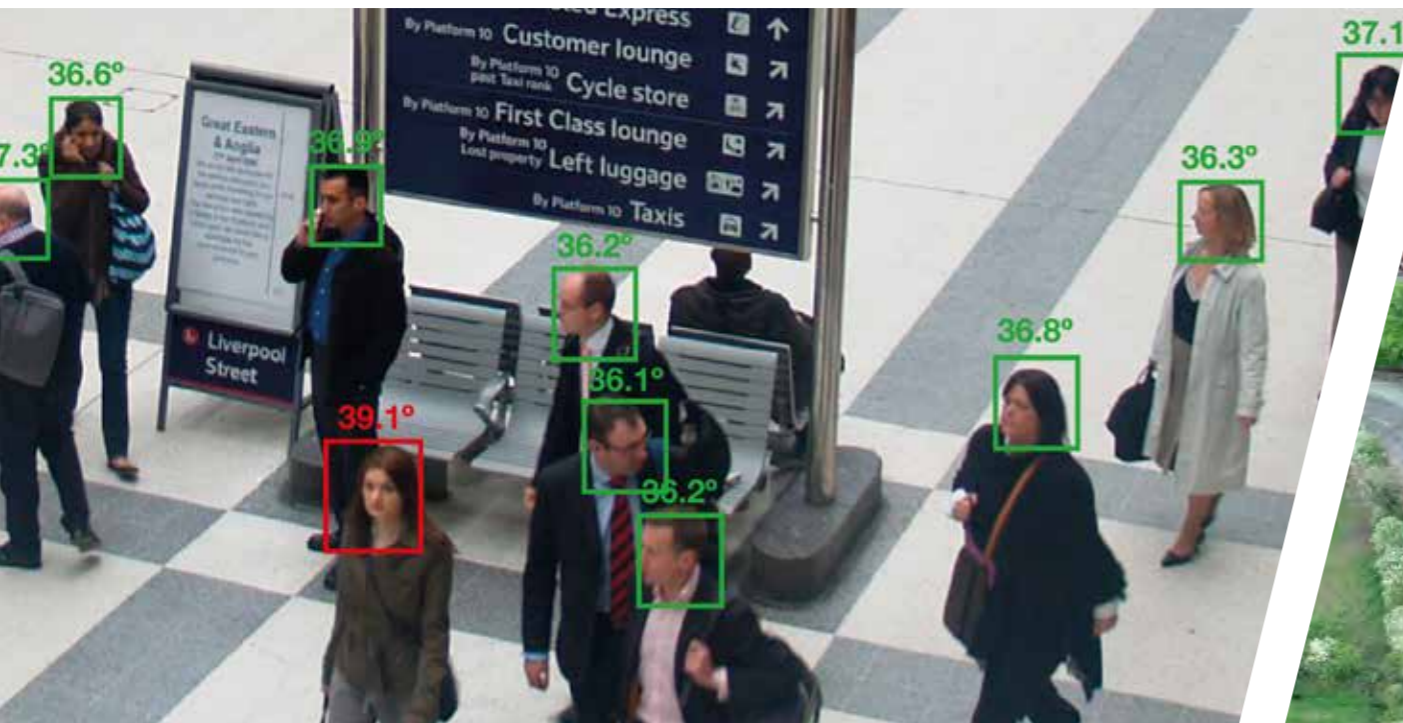

110V Rapid Deployment Cameras (110VRDC's) are perfect for sites with mains electric or a generator running 24/7. They can be used in conjunction with Manned Guarding services or independently on their own. On arrival of the 110VRDC's an escalation process will be set up with the client. They are designed to be a semi-permanent solution for a site that is at risk but also for a site that will develop and may need the CCTV moving as the risk moves.

Gate Automation

Black Diamond Security are specialist installers of state-of-the-art Gate and Barrier Automation. With over 10 years of experience, we offer a full assessment, installation, maintenance and repair services for all domestic and commercial applications.

Body Temperature Detection System

The Body Temperature Detection System can accurately detect facial temperatures of up to 40 people at once with an accuracy of $\pm 0.3^{\circ}\text{C}$, this is ideal for monitoring body temperatures at entrances to events, transport hubs and buildings.

COMPLIANCE AND ACCREDITATION

The SafeContractor scheme provides a health and safety audit service for contractors who want to reassure their clients that health and safety is being handled correctly and sufficiently on their sites.

The aim of the SIA Approved Contractor Scheme is to raise performance standards and to assist the private security industry in developing new opportunities. The Private Security Industry Act 2001 requires the SIA to establish a "system of inspection for providers of security services, under which those organisations who satisfactorily meet the agreed standards may be registered as approved, and may advertise themselves as such".

Black Diamond Security currently holds a nqa ISO 9001:2015. UKAS accredits the certification for Quality Management Systems. It provides the basis for effective processes and effective people to deliver an effective product or service time after time.

Black Diamond Security Ltd currently holds The Railway Safety Accreditation Scheme (RSAS). The Scheme helps to tackle low level crime and anti-social behaviour, improve intelligence and maximise public confidence.

Black Diamond Security currently holds an HABC Level 3 Diploma for our Canine Patrols Service.

The HABC Level 3 Diploma for a Security Dog Handler aims to provide a single but multi-discipline qualification for the professional Security Dog Handler.

This qualification has been developed by NASDU to encompass a number of disciplines which meet National Occupational Standards (NOS) and the training requirements within BS 8517 Part 1 and 2.

Experienced Security Dog Handlers working both General Purpose, Security Dog Handler and Detection Dogs.

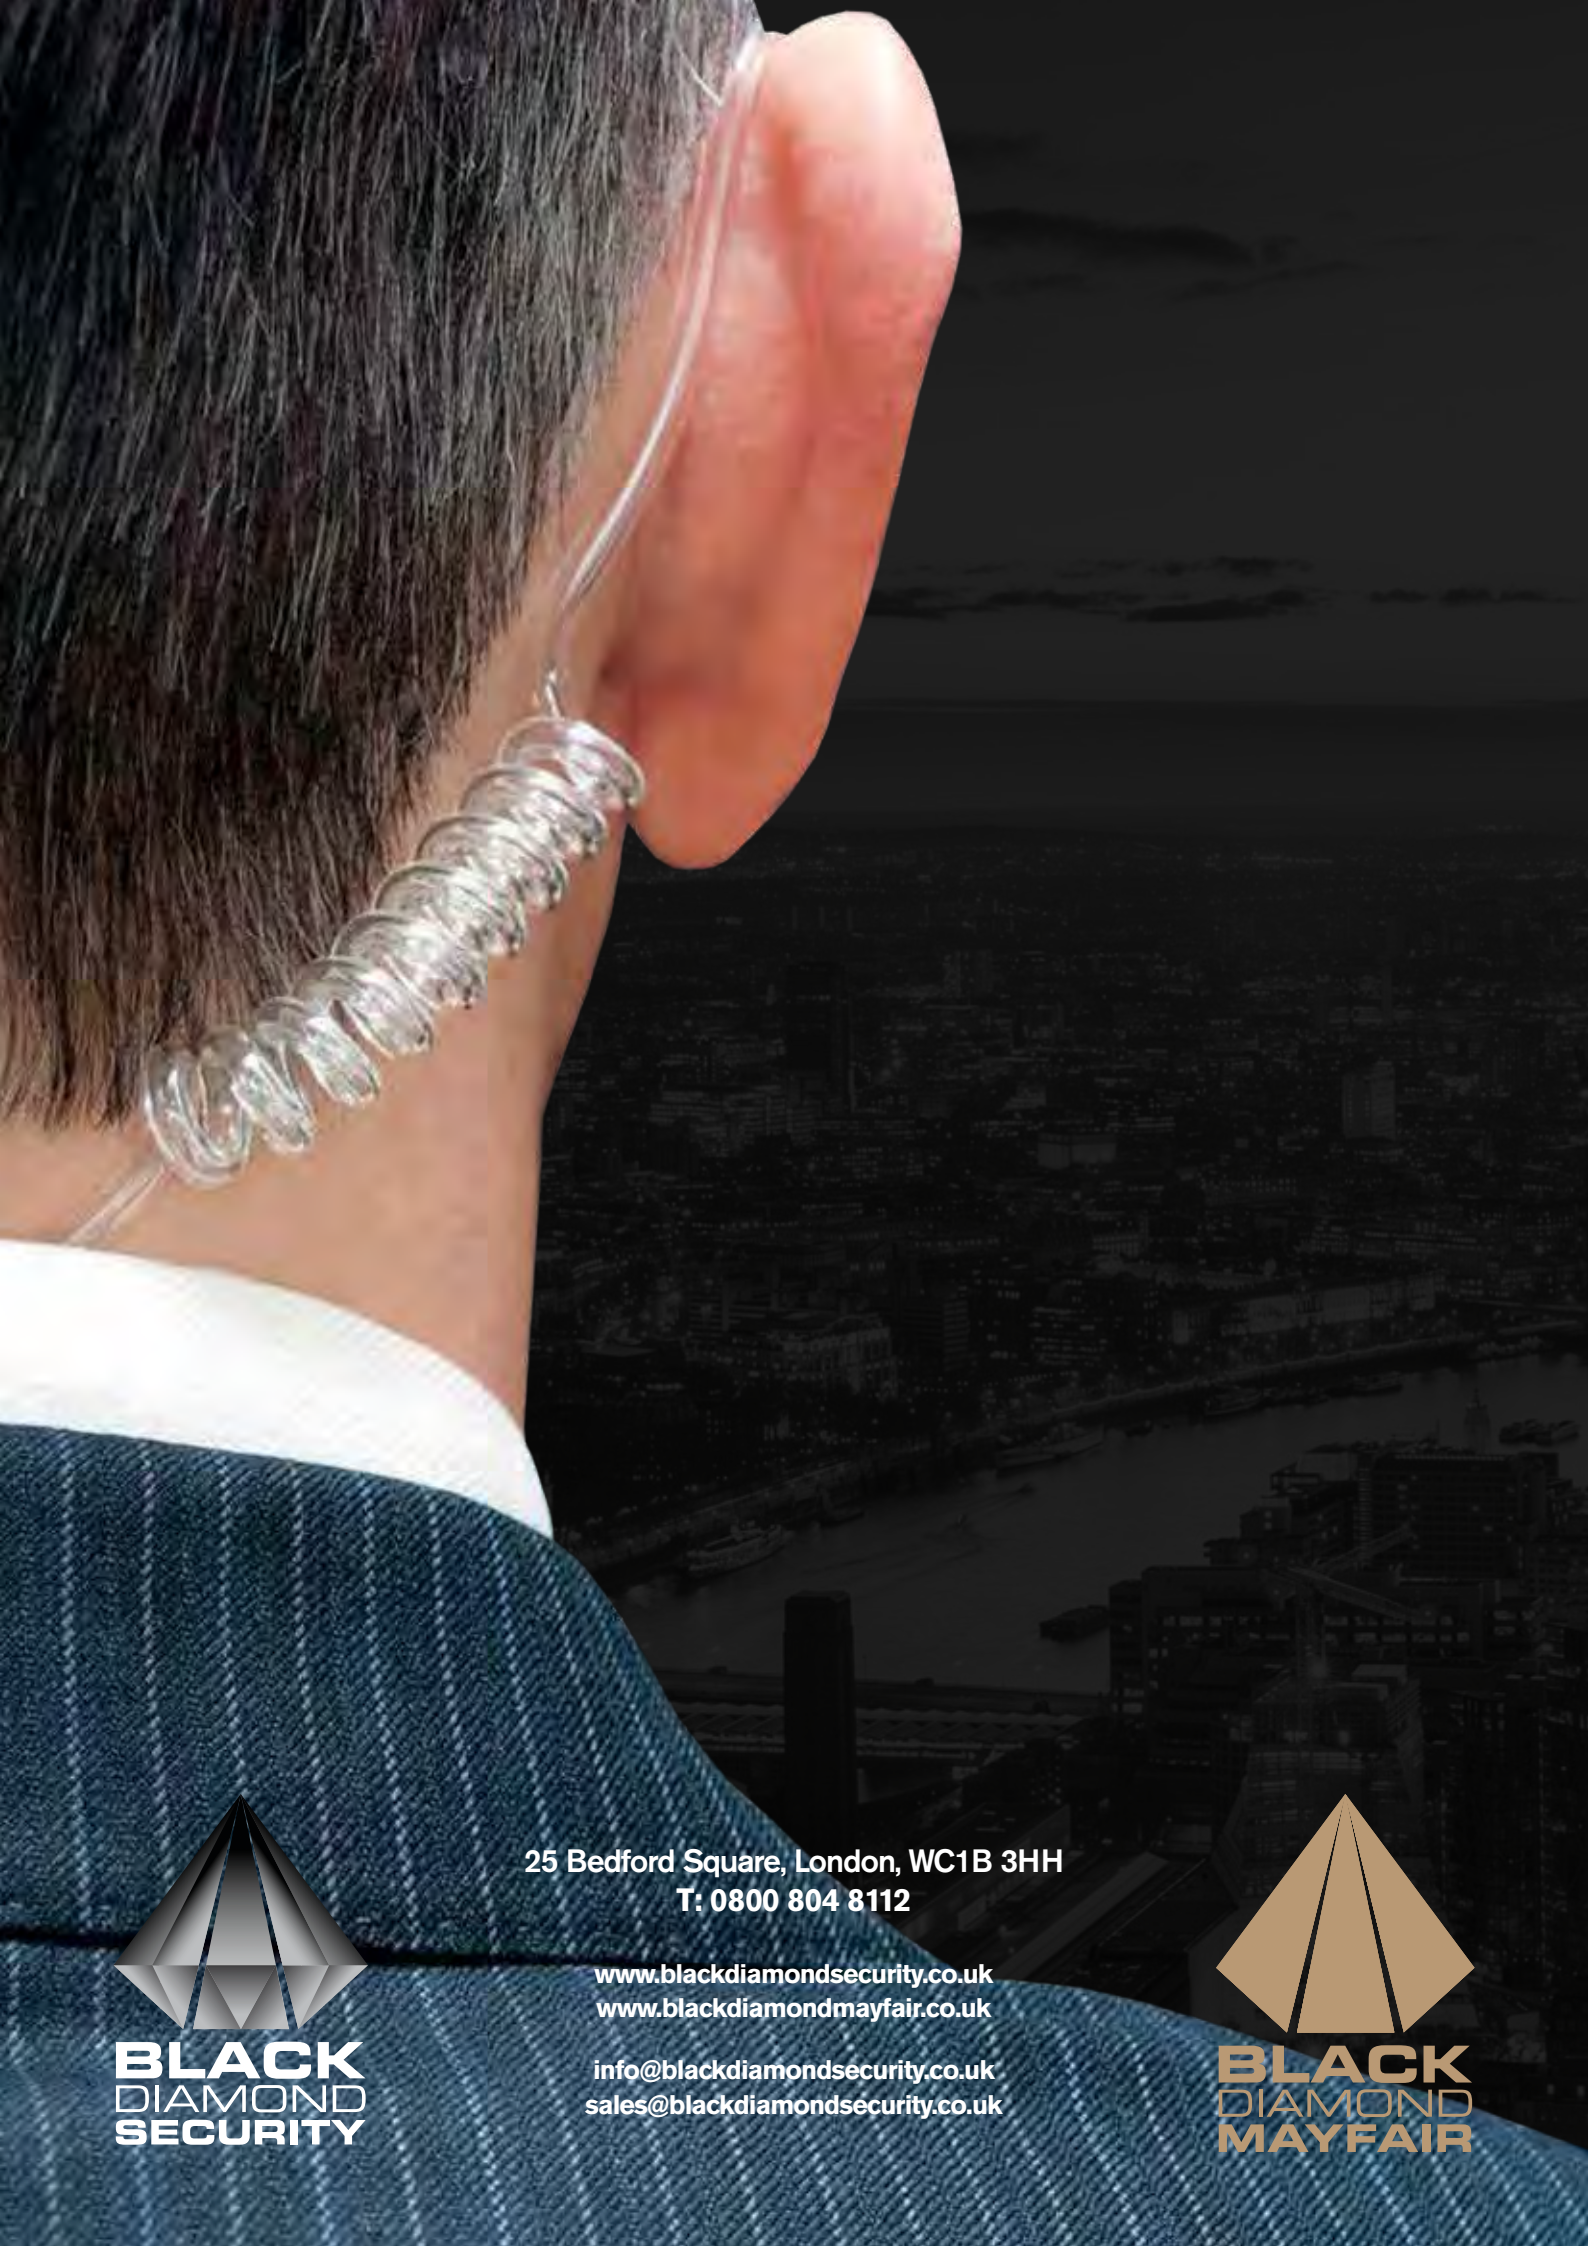

HABC – An awarding organisation approved by the Regulatory Authority OFQUAL and recognised by the SIA.

Black Diamond Security Ltd currently holds a RISQS Qualification & Verification.

RISQS provides customers with a more rigorous process for deriving much higher levels of assurance than registration and qualification. It involves providing documentary evidence that there has been a successful assessment, a process which requires differing degrees of intervention at the supplier's premises, dependent on the risk that the product or service represents.
