LIVE FEED VIDEO ANALYTIC SYSTEM

LIVE FEED VIDEO ANALYTIC SYSTEMS ARE PERFECT FOR PROBLEMATIC HOT SPOTS AND HAVE THE INTELLIGENCE TO GIVE YOU A MULTITUDE OF INFORMATION.

The Live Feed Video Analytic system is a perfect solution for problematic hot spots e.g. gates, level crossings, storage containers etc. It can be powered by the clients' 110V generator or it can be powered by our hydrogen cell, solar panels, and batteries.

We designed The Live Feed Video Analytic system especially for the abuse of railway crossings, gates and storage containers. The system has the intelligence to give you a multitude of information for example how many people have gone through the gate on a specific day, it can also tell you if the gate has been left open for longer than 5 minutes. Another great feature that the Live Feed has is the ability to store 2000 number plates on its own internal memory. (ANPR)
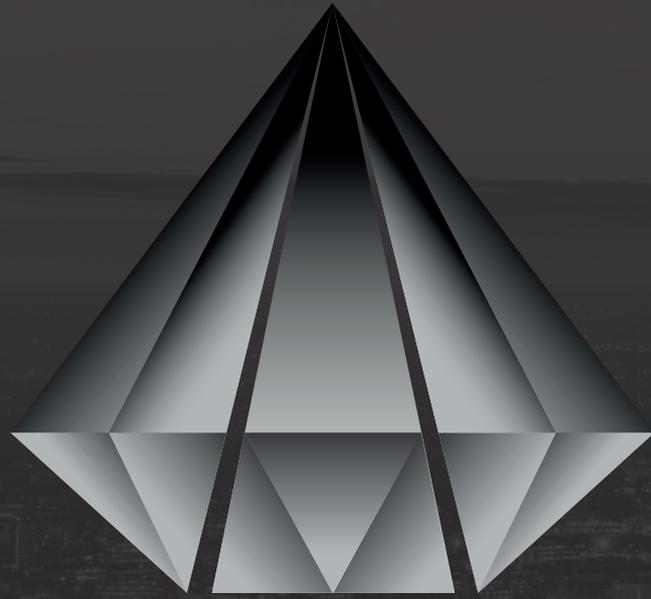

The Live Feed can also provide Health & Safety Management for the site with its deep learning-based analytics.

Line detection technology, exit permitted, entrance not permitted. This can send an alert to our control room so we can give you statistics regarding gate abuse.

LIVE FEED VIDEO ANALYTIC SYSTEM FEATURES

- Counting and filtering of people, objects and vehicles.

- Abandoned and withdrawn objects.

- Direction of people and vehicles.

- Loitering (forbidden areas).

- Camera obstruction, vandalism.
