

The railway industry provides some unique challenges for security, especially when guards are required to work “on or near the line” protecting assets and infrastructure in potentially hazardous environments.

Our management team has over 80 years of combined experience working within the rail sector, giving us full link up approval. We hold the Rail Supply Group Charter Certificate, RISQS Certificate of Audit, RISQS Certificate of Verification and are proud members of the Railway Industry Association, and the British Transport Police RSAS scheme.

We use the best industry practices for our clients by undertaking specific security strategy reviews for all contracts and sites. These are integrated into bespoke packages specific to the needs and requirements of each client.
