

**Solar Camera:  
The Solar Camera is a  
standalone camera  
with built-in internet  
access.**

**The system can be  
sited independently, or  
as a remote addition to  
one of the other Black  
Diamond Security  
products.**

The camera has 30 metre detection with 90-degree coverage and records for 5 days. It is ideally suited for rural locations such as farms or rail access points where there are no mains power available. The camera can come with its own mast for locations where there is nothing to attach the device to, or the unit can be fastened to existing posts, trees, etc, causing no damage to whatever structure it is attached.

## WHY USE THE SOLAR CAMERA?

- Standalone, ideal for rural locations
- Requires no external power
- Fully monitorable by our National Control Centre
- Ideal for fly-tipping, intrusion detection, project management
- Robust and weatherproof, suitable for all environments
- Can record up to 5 days
- Camera can be used for live monitoring of a location, or for reactive monitoring
